

Anti-scratch agent KC6010P is a kind of hardness, high melting point polyethylene wax, improve the hardness of the coating film, due to poor compatibility with powder coating resin, easy to disperse, in the film-forming process migration to the coating surface to form a uniformly distributed protective layer, reduce the coefficient of friction, improve the coating film scratch resistance and smooth performance.

1) Technical parameters

- Appearance: white fine particles
- Melting range: 100°C-110°C
- Density: 0.95-1.00g/cm³

2) Usage

The infusion mixture participates in extrusion in an amount of 0.5%-2% of the total. The specific dosage should be determined according to the test.

3) Packaging and storage

Polyethylene lined kraft paper bags, net weight 25kg per bag. The packaging is sealed, stored in a cool and dry place, and the shelf life is at least 1 year.
